Why the Fed Made a U-Turn: Perceived Risks to Growth Shifted

Fed Chairman Jerome Powell sets aside the central bank's key framework

By Nick Timiraos

Feb. 2, 2019 7:00 a.m. ET

The Federal Reserve **reversed course** earlier this past week when it put interest rate rises on hold, prompted by rising risks to U.S. growth in the months ahead, rather than any signs the economy's health is faltering now.

Fed Chairman Jerome Powell signaled on Wednesday the central bank will **move to the sidelines** to see whether the threats—including from the slowing global economy, trade tensions and the effect of the Fed's rate increases over the last two years—generate a sharper-than-anticipated slowdown for a U.S. economy that continues to look solid by most measures.

The Fed's new stance **marked a U-turn from six weeks earlier** when it raised rates and penciled in two increases in 2019.
